## Profile

---

I am a Mean Stack developer with industry experience building websites and web applications. I specialize in JavaScript and have professional experience working with Angular, Node.js, Express.js, and MongoDB. I also have experience working with Ionic framework. My role is working at the forefront of new technology, solving the challenges that impact both the front-end and back-end architecture, and ultimately, delivering amazing global user experiences.

## Education

---

2018/05 – 2021/06 Jhande, Punjab	<b>Bachelor of Computer Applications</b> <i>PCTE Group of Institutes</i> 🌐
2016/05 – 2018/04 Ludhiana, Punjab	<b>12th (Non-medical)</b> <i>Government model Senior Secondary School</i>

## Skills

---

Angular	NodeJs
GitHub	MongoDB
Ionic Framework	ExpressJs
Javascript	Typescript
Bitbucket	

## Projects

---

### **codexView** 🌐

CodexView.com is an Angular tutorial website that I conceived, designed, and developed to provide comprehensive learning resources for Angular enthusiasts. This platform offers structured tutorials, code examples, and practical insights aimed at helping learners grasp software courses concepts effectively.

### **6figr** 🌐

At 6figr.com, a career platform aimed at assisting users in exploring salaries across different companies, I played a pivotal role in developing various functionalities and creating multiple pages. I implemented dynamic data display based on specified conditions. Additionally, I resolved numerous bugs related to third-party libraries

### **Genvite** 🌐

In my role with Genvite, I contributed significantly to the development of their admin portal. My responsibilities encompassed the seamless integration of new pages and components into the existing framework. Moreover, I engineered robust functionality to retrieve data from the backend systems, subsequently presenting it across various pages within the portal. This involved meticulous attention to detail and a commitment to delivering a cohesive and user-friendly experience.

### **Upgrade Angular Projects**

I have upgrade existing Angular application to the latest version as part of the upgrade and in an effort to reduce layers, when possible, we want to remove the dependency from @ngneat/reactive-forms and use the new angular forms. After update fix functionality to get data from API calls.

### **Acentus** 🌐
